

COMPLETE LISTING OF THE CLAIMS

This listing of the claims will replace all prior versions and listings of the claims in this application.

Please amend claims 1, 3 and 4 as indicated below.

1. (Currently Amended) An event historian for batch processing comprising:
a history executive element for receiving process event information from one or more input sources operating in physical elements of a process and batch procedure event information that includes batch subprocedure event information from a batch control device, wherein the batch control device is separate from the physical elements of the process, and for automatically deriving relationships among portions of said process event information and batch subprocedure event information based on generated event messages;
a storage element coupled to said history executive element for persistently storing said process event information and said batch procedure event information and said derived relationships in response to requests from said history executive element; and
an event information retrieval element for retrieving said process event information and said batch procedure event information in accordance with said derived relationships in response to requests from an application process.
2. (Original) The event historian of claim 1 further comprising:
a continuous data collection element for gathering continuous data in real time wherein said continuous data relates to at least one procedural element of a batch process.
3. (Currently Amended) The event historian of claim 2 wherein said information retrieval element further comprises:
a batch historian view client application for graphically presenting to a user said batch procedure event information and said derived relationships and said continuous data.

4. (Currently Amended) The event historian of claim 1 wherein said information retrieval element further comprises:
a batch historian view client application for graphically presenting to a user said batch procedure event information and said derived relationships.
5. (Original) The event historian of claim 1 further comprising:
a batch event generator coupled to said history executive element as a first input source wherein said batch event generator generates events indicative of execution of procedural elements of a batch process; and
a process event generator coupled to said history executive element as a second input source wherein said process event generator generates events indicative of procedural elements performed within equipment used in the control of said batch process.
6. (Original) The event historian of claim 5 further comprising:
a continuous data collection element for gathering continuous data in real time wherein said continuous data relates to at least one procedural element of a batch process,
wherein said process event generator comprises:
an event log generated by said continuous data collection element.
7. (Original) The event historian of claim 6 wherein said history executive element includes:
a history correlation element for relating said batch events and said process events and said continuous data.

8. (Previously Presented) In a batch processing system, a batch history view client application comprising:
means for retrieving batch procedure event information that includes batch subprocedure event information from a batch control device and process event information from one or more sources operating separate from the batch control device in physical elements of a process corresponding to an identified batch; and
means for visually presenting to a user said batch procedure event information and process event information and automatically deriving relationships among portions of said batch subprocedure event information and process event information.
9. (Previously Presented) In a batch processing system, a batch history view client application comprising:
means for retrieving batch procedure event information from a batch control device and process event information from one or more sources operating separate from the batch control device in physical elements of a process corresponding to an identified batch; and
means for visually presenting to a user said batch procedure event information and process event information and automatically deriving relationships among portions of said batch procedure event information and process event information; and
means for presenting said batch procedure event information and process event information and said derived relationships as a Gantt chart wherein said Gantt chart is representative of procedural elements of the batch procedure.
10. (Previously Presented) The view client of claim 9 wherein said means for presenting said batch procedure event information and process event information and said derived relationships as a Gantt chart further comprises:
means for presenting said Gantt chart in an absolute time scale.

11. (Original) The view client of claim 9 wherein said means for presenting said batch procedure event information and process event information and said derived relationships as a Gantt chart further comprises:
means for presenting said Gantt chart in a batch relative time scale.
12. (Previously Presented) The view client of claim 8 further comprising:
means for retrieving other batch procedure event information corresponding to
a second identified batch; and
means for presenting to a user said other batch procedure event information
and relationships among portions of said other batch procedure event
information wherein said means for presenting said other batch
procedure event information includes:
means for indicating differences between said batch procedure event
information and said other batch procedure event information.
13. (Previously Presented) The view client of claim 12 wherein said other batch
procedure event information represents processing of a golden batch for
comparison with other batches represented by said batch procedure event
information.
14. (Previously Presented) The view client of claim 12 wherein said means for
visually presenting includes means for presenting said batch procedure event
information and said relationships in real time as said batch procedure event
information is generated.
15. (Previously Presented) The view client of claim 14 wherein said means for
presenting said batch procedure event information in real time includes means
for scrolling said batch procedure event information horizontally across a user
display screen.

16. (Previously Presented) The view client of claim 14 further comprising:
continuous data collection means for gathering continuous data in real time
wherein said continuous data relates to at least one data point of a
batch process,
wherein said means for presenting said batch procedure event information in
real time includes means for presenting said continuous data in real
time as said continuous data is gathered.
17. (Original) The view client of claim 16 wherein said means for presenting said
continuous data in real time includes means for scrolling said continuous data
horizontally across a user display screen.
18. (Previously Presented) In a batch processing system, a batch history viewer
comprising:
a data access device that retrieves batch procedure event information that
includes batch subprocedure event information from a batch control
device and that retrieves process event information from one or more
sources operating separate from the batch control device in physical
elements of a process corresponding to an identified batch process;
a display device that visually presents to a user indications of said batch
procedure event information and process event information; and
a routine that automatically derives relationships among portions of said batch
subprocedure event information and process event information to be
displayed to the user on the display device.
